Test report and analysis of online website testing tool.

Simin Zhai

I use four website analysis tools to test my personal website. The result analysis is in the following.

1.sitespeed

200 means server access the request successfully

The time to access the website

The size of the website

It has different locations to access

The shortest and longest time to access the website and the average in total.

Check URL availability from different spots

The Start Render gives the time necessary for a first element to render on the page, regardless its size or its importance for the user. This can be a background colour, a text or else, but in every case, a strong sign is sent to the visitor: the page is rendering, operations are in progress and the rest of the content should come.

Performance Results (Median Run)

	Load Time	First Byte	Start Render	Speed Index	Document Complete			Fully Loaded			Cost

Top priorities for website improvement

💡 Add meaningful anchor text that describes the link's destination. If the link contains an image, ensure you have provided alt text. (read more)

💡 Encourage sharing of your content with social media buttons on articles and pages of your website. The amount of social activity a website should have depends very much on the type of website, its target audience, and how long it has been in operation. (read more)

0.0 Facebook page

It says I don't have the facebook page, but actually I have. It is so weird.

f This website does not appear to be associated with a Facebook page.

⚠ This website was found to contain some links to Facebook, but none appear to be public Facebook pages associated with this website. Close recommendations ▲

💡 Sign up for a Facebook page and make sure it is linked to from your site, or if you already have one make sure it is public.

Links to Facebook found

Facebook Page URL	Name	Likes	Type	Links back
www.facebook.com/profile.php?id=100015698737663 ⧉	?	?	Personal profile	?

1

Source: Facebook ⧉

0.0 Internal links

❌ 5 links have no text describing their destination. Links on a page should describe their destination for the benefit of both screen readers and search engine spiders. Show recommendations ▼

0.0 Twitter   Help ?

| | This website does not appear to be associated with a Twitter account. |

⚠ This website did not contain a link to Twitter. Show recommendations ▾

0.0 Incoming links   Help ?

The volume and quality of incoming links to a site is very important. Search engines like Google treat a link to site as a 'vote', ranking it higher in search results. The more relevant the site, the higher weight the vote carries.
The volume of incoming links to a site is also a good measure of the popularity of a site and how well it is marketed online.

| 🔗 | 0 pages link to this website | 🌍 | 0 domains link to this website |

❌ No other pages were found linking to this website. The volume and quality of incoming links is known to influence a website's search engine ranking. This count may not include links which are hard to find or have been added recently. Show recommendations ▾

0.0 Analytics

Help ?

I have no analytics software for this website

0%
of pages use analytics

No Analytics Solution
❌

❌ None of this website is using any recognised analytics software. It is still possible to gather a great deal of information from webserver logs, however complete visitor analysis requires client-side Javascript or an image not found here. Show recommendations ▾

ⓘ Note that this test can only detect recognised analytics solutions. If an analytics solution is new, obscure or used in a non-standard way (e.g. it has been customised) it may not be detected.

0.6 Domain age

Help ?

When I registered for this domain name

This domain was registered
October 2, 2017

This domain expires
October 2, 2018

⚠️ The domain name jasminefy.com was registered on Monday, 2 October 2017. Because it is using a domain name registered in the past three months, pages on this website are likely to appear lower in search engine results than those from websites that have a more established domain name.

2.0 Meta tags

Some metadata has great value, particularly to search engines. Correct use of metadata can improve your placement in search engines, but more importantly how your website appears when in a search engine.

⚠ All pages include at least some metadata, but no pages have a description meta tag. The description meta data is important as it appears on Google's search result pages.
Show recommendations ▾

Meta Tags (name attribute) ▾

- -

2.0 Images

100%
of images have a clearly defined size

No images
are being resized by the browser

✓ All images have defined sizes using width and height attributes in the HTML. These attributes are optional, but strongly recommended as they help the browser arrange the page more quickly.

⚠ 1 images on this website could not be downloaded. Broken images may cause the website to display incorrectly for visitors. Show recommendations ▾

7.6 Server behaviour

404 page ✓

Compression ✓

✓ This website handles missing pages correctly by sending a 404 HTTP status code.

✓ This website was served with GZIP encoding. This is very good because it reduces the loading time of a web page.

✗ There was no website found on http://jasminefy.com. This is bad, as visitors might presume they can visit this website by visiting that address. Show recommendations ▼

There are many ways to improve the efficiency of a website and how it's treated by search engines by configuring the website's server settings.

7.9 Code quality

✗ W3C Compliant

ℹ None of the pages could be validated. Show recommendations ▼

⚠ The doctype of this website couldn't be determined.

✗ One page of this website was found to be using the tag <i>. It is widely regarded that use of presentational elements like <i> should be avoided. Show recommendations ▼

This test checks to see whether the website uses semantic HTML and whether or not it is is W3C compliant.

I will improve that

✓ None of the tested pages of this site use tables for layout. This is excellent, as using tables for layout is not necessary and they should only contain tabular data. A well built website should use div elements and CSS to create the desired layout.

9.2 Amount of content

Average words per page

500

0   1000

707 average words per page

ℹ This website has an average of 707 words per page. The amount of content on a website has been shown to correlate with its search engine ranking.

Amount of content discovered ▼

10.0 URL format

🔗 **Every URL**
is well written

This test checks that the format of URLs on a website is appropriate. The URL, otherwise known as the address of the page, is what appears in the address bar at the top of your web browser.

10.0 Printability

📧 **100%**
of pages are optimised for printing

A well-built website will have a seperate print stylesheet linked to in the head of the document. The print stylesheet should include a style which improves the appearance of the content when printed out.

✓ All of this website appears to be optimised for printing (using CSS).

Media specific CSS detected ▼

10.0 Headings

Semantically correct content is good for search engine optimisation and helps visitors without a visual browser access your content.

boston competitions contact display education internship patent

product research simin siminz skills student university zhai

✓ All pages were found to use defined headings. This is excellent as it allows visitors and search engines to summarise the content of webpages quickly. Correctly defined headings aid accessibility and are particularly important for search engine optimisation.

Page headings detail ▾

10.0 Page titles

T	100% of pages have defined titles	0% of page titles are weak

✓ All pages were found to use page titles appropriately. Page titles appear in search results and at the top of the browser's window when visiting the site. Appropriate page titles are particularly important for search engine optimisation.

Page titles

Page title	Notes
Simin Zhai's personal website ⧉	OK

1

10.0 Mobile

Mobiles and tablets are increasingly used to browse the web. Most websites are not designed to work on the smaller screen sizes that these devices have, so it is considered best practice to make your website adapt to give the visitor a better experience. Some websites that use Adobe Flash may not work on a mobile device at all.a

✓ All of this website appears to be optimised for viewing on a mobile phone or a tablet.

Media specific CSS detected ▾

- -

10.0 Freshness

This test checks to see how recently a website has been updated.

Last updated
October 9, 2017

✓ It looks like this website was last updated on Monday, 9 October 2017. This is good because visitors perceive up-to-date websites as more credible. Websites that are updated regularly are also spidered by search engines more often.

ⓘ To find this information we used the last modified dates reported by this website's server in addition to looking for dates written on each page.

All dates found ▾
